Category:Maps Category:Geodesy Category:Cartography Category:Geographic coordinate systemsAn American Legion post has received a standing ovation after it awarded the Eagle, Globe and Anchor to a Marine at an anniversary event in Wisconsin. A video from the post's Facebook page shows dozens of people clapping as a Marine presented the honor to Sgt. First Class Eugene Swinford at an event honoring the post's 50th anniversary, the Wausau Daily Herald reports. The ceremony was held at the post in Wausau, Wisconsin, on Monday and honored Swinford, who fought in the Battle of Iwo Jima during World War II. The Marine presented the award for Swinford's participation in the battle, which happened 50 years ago this month. The post says it is pleased to honor its son for his service to the country. Swinford is still active in the Marine Corps. He served in Fallujah, Iraq, in December and has been deployed twice to Afghanistan since 2011. A body of literature has recently established that various stressors can induce the secretion of corticotrophin-releasing hormone (CRH) by the hypothalamic paraventricular nucleus (PVN). A body of literature has recently established that various stressors can induce the secretion of corticotrophin-releasing hormone (CRH) by the hypothalamic paraventricular nucleus (PVN). A body of literature has also established that stress can activate the hypothalamic-pituitary-adrenal (HPA) axis and that stressor-induced corticotrophin-releasing hormone (CRH) release may contribute to the activation of the HPA axis. The proposed experiments will investigate the mechanism by which stress activates the hypothalamic paraventricular nucleus (PVN) to induce CRH release. Additionally, this study will investigate whether CRH release from the hypothalamic paraventricular nucleus (PVN) has any effect on ACTH release. Two animal models of stress will be used: restraint and foot shock. These stressors are expected to activate the hypothalamic paraventricular nucleus (PVN) and induce the release of CRH. Using the technique of microdialysis, we will record the in vivo release of CRH, ACTH and arginine vasopressin (AVP) in the PVN of the
