Ghozali (2011), states that this test aims to determine whether the regression model found a correlation between independent variables. Ghozali (2011), explained, variable is reliable if Cronbach Alpha value $> 0,6$. 3.. To achieve not more than 5% of error, SPSS 2.2 was utilized to test the . spss imam ghozali 2011 pdf_1. Good UX is here to stay, the only question is when we can fully accept this as a fact. Human beings will always have a hard time accepting new information as it comes out. When it comes to design and UI which are based on the user's needs, it's natural that technology will change and evolve because humans adapt to it. In the future, we will look back and marvel that such a technology was even possible at all, but it also creates more challenges to keep up with, while at the same time making it possible to use technology to accomplish things you previously couldn't. When I was designing interfaces and completing user flows for bigger companies, I had the challenge to design the easiest to use and most intuitive interfaces. And it was never easy to find developers who matched my skill set to accomplish that. In the end I found a complete opposite skill set. Developers with very little experience in front end design and that didn't even know what responsive design was. These design and development projects started to feel like a great waste of time because the difference in skill sets was just too vast. It was also hard to solve problems because the programmers seemed to be unable to grasp the end user perspective and treat the problem, as if it would be solved if the user felt comfortable. When it comes to design and user experience, the users needs are of prime importance. Development and design are the same in their basic principles. They both depend on someone having a clear end user goal in mind and that goal having a clear meaning. And when we talk about those clear goals we come to UI and UX which were invented to become as natural and intuitive as possible for a user. The UX and UI was originally built to increase the understandability of a website or an app, but we recently started to realize that there's so much more

Transcyte is a new thermodynamic laser system designed to safely and effectively remove corneal neovascularization and degeneration. This article reports the one-year clinical results of the Transcyte laser in the treatment of intrastromal corneal foreign bodies, corneal neovascularization, and corneal degeneration. In all 4 cases, Transcyte laser treatment resulted in a long-term regression of the underlying cause of corneal abnormality with maintenance of the integrity of the epithelium and visual acuity./* Copyright 2020 The TensorFlow Authors.
