Play Aap Ka Surroor music video free. Listen to Aap Ka Surroor song online. Aap Ka Surroor music download.Q: Getting context for the future in Python As I've read it, context managers may be used to create a context for a group of operations, and then clear that context at the end of the execution. I have been trying to accomplish something like this by using a loop, without any luck. In the code below, I created a context, and then executed a loop, which in turn executed some code in the loop body (and in the loop body, a function which calls yet another function). This should "stack" the execution of the functions. Instead, the result was that the functions were executed, but the loop was not. I'm wondering if there is a way to actually "stack" the functions with the loop, or if there is a better way to do this. Edit: For completeness, the code I'm trying to write is: import time import logging def func1(self): logging.debug("%s started" % (self)) time.sleep(5) logging.debug("%s finished" % (self)) def func2(self): logging.debug("%s started" % (self)) time.sleep(5) logging.debug("%s finished" % (self)) class Test(object): def \_\_init\_\_(self): self.log\_called = 0 def setup(self):
