Systemic diseases may affect the bowel, such as cancer, inflammatory bowel disease, or systemic vasculitis. All of these disorders may cause colitis and may also be associated with administration of certain drugs. Although all drugs have the potential to cause bowel inflammation, certain groups of drugs (eg, nonsteroidal anti-inflammatory drugs, antibiotics, opiates, and chemotherapeutic agents) are frequently involved. In addition, certain drugs may predispose patients to developing inflammatory bowel disease. In the following review, we outline the clinical manifestations of drug-induced colitis.DESCRPTION (Applicant's Abstract): Infection of the
