expression for the number of digits in a number:  $\log_2(\text{number of digits})$

$\log_2(\text{number of digits})$  is the natural logarithm of the number of digits. The general rule is that the logarithm of a number A to the base B is equal to the number of digits in the decimal representation of A to the power of B. Why do we use Binary? A number can be represented in any base. We choose binary because it is easy to understand, and it has the same size as any other base. The Binary number system consists of two digits, represented by 0 and 1.
